Gearing Up for SAP BW/4HANA & BPC 11.0

Enterprises can expect improved business plans with SAP's next generation Business Planning and Consolidation (BPC) leveraging on its new features: Simplicity, Openness, Modern User Interface, and High Performance. BPC 11.0 runs in conjunction with another new product, the SAP BW/4HANA data warehouse, which takes advantage of SAP's in-memory HANA database.

CPM Consulting was able to test-drive BW/4HANA at SAP's Partner Test Engagement Initiative, giving the company early exposure to the new data warehouse product. CPM's financial acumen and cutting-edge technical expertise helps position the company as the Partner of Choice to help enterprises successfully transition to BW/4HANA and BPC 11.0.
